

Lifestyle® 18 DVD Entertainment System

ADAPTiQ® audio calibration system

Enjoy greater freedom of speaker placement — without the tonal adjustments. Available only from Bose®, this U.S. patented, easy-to-use technology analyses the way your room's dimensions and other variables affect sound, then automatically adjusts the sound of your Lifestyle® DVD system to the acoustics of your room.

Bose® link

Connect compatible Bose® products to your Lifestyle® DVD system for listening in as many as 14 additional rooms — even outdoors. With Bose® link technology, you can have independent volume control in each room, as well as access to two different audio streams from the same Lifestyle® system. This technology can also be enabled without any room-to-room wiring with the purchase of the Bose® link AL8 homewide wireless audio link.

Media centre with AM/FM tuner and integrated DVD player

An elegant control centre with built-in DVD/CD player and AM/FM tuner. Integrated technologies work together to deliver today's most popular audio and video content without the need for bulky components.

Acoustimass® module

This Bose® breakthrough works in concert with the small speakers to deliver the full range of sound. The module delivers the clarity of pure low-frequency reproduction down to the lowest

frequencies, even at the loudest levels. When the module is placed behind a curtain or chair, all of the sound seems to come directly from the small Cube™ speakers.

Virtually Invisible® cube speakers

Single cube speakers — each only 7.8cm high — that deliver high-quality sound for music and films. Enjoy premium performance from speakers so small you can place them nearly anywhere and they seem to disappear into your décor.

Control integration

Use the LifestyleE® system's radio frequency remote to operate most popular functions on other infrared-receiving equipment in your home entertainment system: TV, VCR, PVR, cable box or satellite receiver. The TV sensor makes turning on your home entertainment system a one-button operation.

Integrated system design

This system is designed so every element — media centre, speakers and Acoustimass® module — works in harmony, enhancing performance and ease of operation.

Proprietary Videostage® 5 decoding circuitry

Proprietary Bose® technology allows you to hear home cinema sound from practically everything you play, even older TV programmes and videotapes that weren't recorded in surround sound.

Digital 5.1 decoding

Improved realism from 5.1-encoded DVDs, DBS or HDTV.
